DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

1. Claims 1-32 are rejected under 35 U.S.C. 102(e) as being anticipated by Chang et al (U.S. Patent No. 6,711,297 B1).

- a. Referring to Claim 1, Chang discloses an image storage device for storing a digital image (an image archive 112 is the claimed “image storage device”, column 5, line 7. Source images are the claimed “digital image”, column 5, line 6); a client computer (client computer 150, column 5, line 17) coupled to the communication network (network 160, column 5, line 18), wherein the client computer generates and transmits across the communication network coordinates (pixel coordinates, column 9, lines 44-45) defining a region of interest (the image area is the claimed “region of interest”, column 9, line 46) within the digital image; a server computer (server 140, column 5, line 16), coupled to the communication network and the image storage device, wherein the server computer performs the steps of: pre-processing the digital image through a lossless wavelet transformation (column 6, lines 18 and 47); receiving the coordinates from the client computer (column 9, lines 58-60); and progressively transmitting to the client computer the region of interest within the

digital image defined by the coordinates (column 11, line 67 and column 12, lines 1-5).

- b. Referring to Claim 2, Chang discloses wherein the server computer progressively transmits the region of interest to a select quality threshold (zoom factor at column 9, line 50 is the claimed “select quality threshold”).
- c. Referring to Claim 3, Chang discloses wherein the server computer progressively transmits the region of interest to lossless quality (column 6, line 47).
- d. Referring to Claim 4, Chang discloses wherein the client computer reverse transforms the region of interest received from the server computer to form a lossless reproduction of the digital image (column 9, line 67).
- e. Referring to Claim 5, Chang discloses wherein client computer displays the lossless reproduction of the digital image on a web browser resident on the client computer (see figure 8B).
- f. Referring to Claim 6, Chang discloses wherein the server computer performs the pre-processing step through a lossless wavelet transformation comprising two non-identical one-dimensional transforms (column 8, lines 7-9, two different transforms for the columns and the rows. These two different transforms are one-dimensional transforms as mentioned at column 10, line 63).
- g. With regard to Claim 7, the only different between Claim 7 and Claim 1 is Claim 7 calls for additional feature steps of generating wavelet coefficients corresponding to the digital image (column 9, line 4); and generating half-bit flags, each half-bit flag corresponding to a wavelet coefficient (Poly[j] is the claimed “half-bit flags”, column 9, line 15).
